

Firefox vs. Camino, a quick comparison of features:

BROWSERS:		Firefox	Camino	NOTES
FEATURES	auto-complete	<ul style="list-style-type: none"> address bar in all forms completion-suggest in search box 	<ul style="list-style-type: none"> address bar 	Camino likely adding completion for all forms in next version
	CMD-return to open in new tab	works	does not work	Camino slated to fix in next version
	RSS feeds	handled with live bookmarks, options for other apps	similar support	Camino passes feeds to your default reader (can include Camino)
	use of services menu	not supported, not a cocoa app	full support	in FF, especially annoying: can't use quicksilver's ⌘-esc text grab feature; must use copy/paste
	compatibility with Menu Master	unpredictable at best!	full support	if use MM, makes scripting FF especially yucky.
	compatibility with Growl (download notifications)	no support	full support	ff used to have an extension to use growl, not compatible with new version
	speed	slower	faster	Camino built for mac, leaner
	adblocking	<ul style="list-style-type: none"> must install & enable extension must customize for any given page must use special command for flash items 	<ul style="list-style-type: none"> fully automatic blocks all ads and popus, simple preference setting 	note also that FF extension must be updated and settings must be saved (and can be lost)
	keywords for bookmark access	can use only for individual bookmarks	can use for bookmarks and open-in-tab bookmark folders	very useful for some
	del.icio.us	several options for integration / tagging	fewer options	popup doesn't grab highlighted text
	tabs	can rearrange	can't rearrange	likely in next Camino version
